The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless --

(a) the invention was known or used by others in this country, or patented or described in a printed publication in this or a foreign country, before the invention thereof by the applicant for a patent.

Claims 1 to 9 are rejected under 35 U.S.C. 102(a) as being anticipated by Cragoe et al US 6,751,898. Cragoe et al US '898 teach fluorenone derivatives as recited in the claims. See column 2, lines 5-10, column 9, lines 5 to column 10, line 41. It is also noted the patentees disclose the claimed products notwithstanding any intended use.

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1-21 are rejected under 35 U.S.C. 103(a) as being unpatentable over Cragoe et al US 6,251,898 taken with Cragoe et al US 4,604,396. The Cragoe et al 'US '898 reference is applied as in the above rejection. Patentees do not expressly teach estrogen receptor modulator use. However, the cited art does teach compounds having similar physical properties and therapeutic effects. See, for example Cragoe et al US '396 column 9, lines 1-45. In light of this one of ordinary skill would have expected similar compounds to have similar effects and a such would not have been unexpected.
